HW6 Initial Feedback Issues:

- **last table wasn't ideal: perhaps you could have collapsed some of the categories? sorted this?** - Looking back, I could have removed the jobs that only had one observation or sorted the table in descending order/found a better way to display this information.

- **missed opportunity to include the number of deaths in the legend for your otherwise excellent figure.** - Agreed, I tried including the number of deaths in the legend in the map figure but there were a bunch of errors that came from this using the tmap package that I couldn't solve. Now, I am aware of a different method to coding spatial data that would allow me to include the number of deaths as well.

- **"we gain"?** - This seemed like a poor word choice that was overlooked, I changed it to "we see" instead of "we gain."
